ABSTRACT

5 A current switching circuit having greatly reduced charge  
injection effects with the introduction of a mirror path to mirror the switch  
path. The disclosed embodiment of the mirror path comprises a  
complementary switch and a pulling amplifier, e.g., a pull-down amplifier  
for a source current switching circuit, or a pull-up amplifier for a sink  
current switch circuit. The pulling amplifier mirrors the status of an output  
path of a current source, e.g., a transistor current source, such that when  
the current source is switched ON or OFF, the switching process with  
10 respect to the load, e.g., a load capacitor, is smooth and provides a clean  
current waveform due to greatly reduced charge injection.
